

The **Add/Remove check-boxes** serve as a ‘shopping cart’ function. The screenshot above just happens to have the following actions partially captured: click an **Add**, it drops that tool to the next container where 'Remove' is pre-selected, if the Customer changes their mind, they deselect the **Remove** box next to that tool and it falls off the list/cart and returns to the top (depending how the tables re-query/refresh).

Teams are free to modify as needed to achieve the same ‘cart’ functionality. The goal is the cache those tools the Customer wants until they are ready to check out completely (submit/confirm reservation) since they many bounce around and choose different tool combinations.

Tools Added to Reservation

Tool ID	Description	Rental Price	Deposit Price	Remove
23	Folding Step Ladder	\$6.00	\$16.00	<input checked="" type="checkbox"/>

Calculate Total

When the Customer selects the “Folding Step Ladder” short description by clicking the “Add” checkbox from middle container, this moves the tool down to a new container “Tools Added to Reservation/Cart” where a new “Remove” checkbox is pre-selected. When the customer unchecks the “Remove” checkbox, the tool is removed from the pending reservation/cart.
